Rev: 1

Id: 2/13

TODO (REV 2):
 Correction to U2/U4 differential amplifiers:
 - Input impedance is asymmetric so termination should also be.
 Change R24 and R25 to 57.6 ohms? Don't want to add a BOM item though, or make reactive loading asymmetric. Investigate...

Power supply decoupling
 These are distributed among @U3's power pins.

These decouple the amplifier
 ends of the differential T-lines

KiCad E.D.A. kicad (after 2015-mar-04 BZR unknown)-product

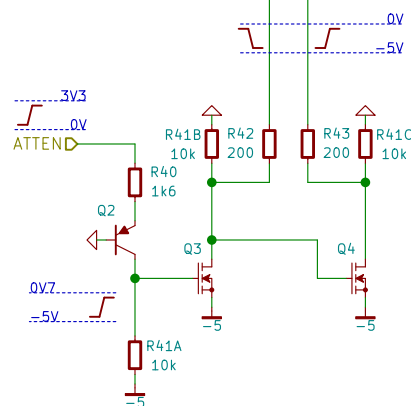

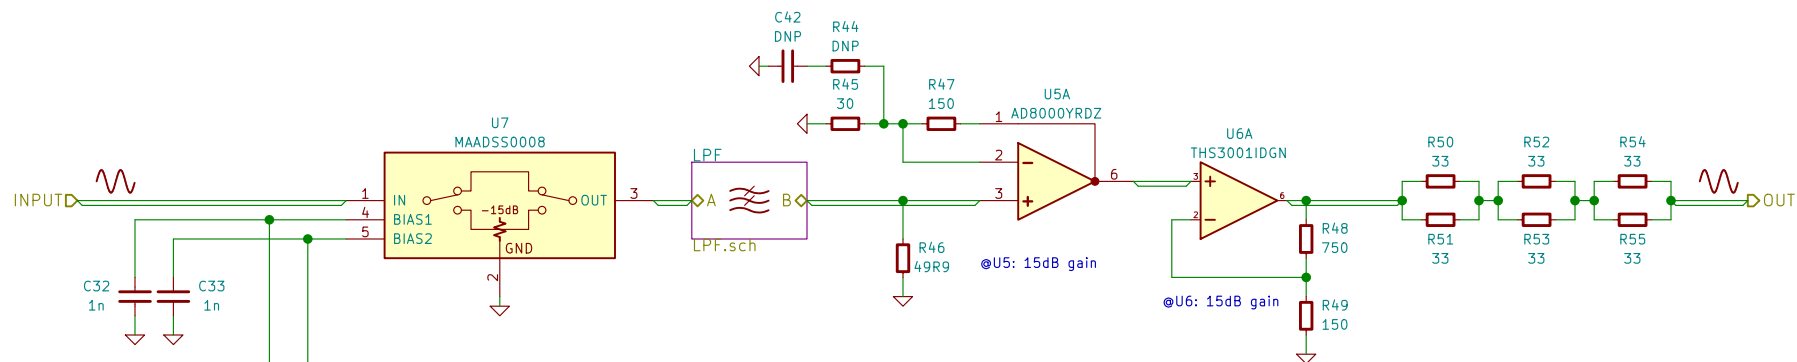

Rev: 1

Id: 3/13

TODO (REV 2):

- Can we capacitively couple the signal into U5? The diff amp can produce significant offset. Cap-coupling 50R is impractical, but directly before U5 would allow removing the bias post-termination.
- Along those lines, can U5 become a transistor amplifier? BFR540?

@C42 and @R44 are optional compensation devices to boost gain slightly at high frequency, if post-fab testing shows that stray capacitance from layout results in a rolloff. In the first revision, do not populate them.

GaAs switch bias and truth table:

Low = -5V High = 0V

BIAS1	BIAS2	ATTENUATION
L	H	-15dB
H	L	0dB
L	L	Switches open
H	H	Both paths closed

CTRL	BIAS1	BIAS2	SELECTED
L	H	L	0dB
H	L	H	-15dB
